Date

WebAngel Internet Starter Package: Additional Information.

1	Domain Name: The starter package includes 12 months registration of a .com domain name, valued at \$20. If you would like an alternative domain name, we will give you a \$20 credit towards the cost of the name you choose. For example, a .com.au domain costs \$80 for 2 years. If you wanted this instead of a .com name, you would add \$60 to the basic starter package cost. Please visit WebAngel.com.au/starter.htm and the links on that page for more information about selecting a domain name, and checking whether it is available.
2	Account Access Details Please provide an 8 digit username and a password. This will be used for providing upload access to your account, as well as to the control panel where your website and email administration takes place.
3	Website Colours. Please enter the 6 letter HEX code for the colours you would like to use on your web page. The web safe colours are available at http://www.hypersolutions.org/pages/rgbhex.html If you wish, you can just use general names like black, crimson, light blue, etc and we will do the rest.
4	Payment Amount This is where you can add any optional extras, after discussing them with us. Please total the amounts to give a sub-total, and then add 10% Goods and Services Tax if you are an Australian resident.
5	Email Accounts The email addresses for your domain will be in the form of name@yourdomain.com The “ Name ” column is the first part of the email address before the “@” sign. For example, if you put the word “tony” in this column, we would set up the address tony@yourdomain.com for you. The “ Password or Forwarding Address ” column. The information you put here will tell us what to do with mail sent to tony@yourdomain.com . It will either be forwarded to another email address, or stored on your account. If you write an existing email address in this column (for example, you@yourisp.com.au) the mail addressed to “tony@yourdomain.com” will be delivered to the email address you@yourisp.com.au . When you check the mail for you@yourisp.com . You will also receive mail addressed to tony@yourdomain.com If you put a password in this column, we will create a mail box called tony@yourdomain.com (the name in the left column). Mail sent to tony@yourdomain.com will be stored in this mailbox until you log in and collect it. We provide full instructions to set up your email program to do this, and also a simple, one click setup option in your hosting control panel. We’ll also help you by phone if you have any problems.
